Issue 2 2015

UPCOMING EVENTS

May
13th: REFINET project kick-off meeting
21st-22nd: FEHRL General Assembly

June
2nd-3rd: SENSKIN project kick-off meeting
4th-5th: ECORoads project kick-off meeting
10th-11th: FLOW project kick-off meeting
16th-17th: LCE4ROADS Project Management Group meeting
19th: SETRIS project kick-off meeting
24th-25th: SAFELIFE-x project final conference
25th: Infravation Management Group meeting

FIRM15 focuses on innovative maintenance...

Dear Reader,

On 22nd-23rd April, some 110 transport infrastructure research experts, including two

MEPs, European and national policy makers and associations, leading industry and SMEs, standardisation agencies and the media, met for the [2015 FEHRL Infrastructure Research Meeting \(FIRM15\)](#) at the Diamant Centre in Brussels, Belgium. Throughout the two-day conference, several debates were held and solutions presented for R&D&I on the theme of "*Innovative maintenance of transport infrastructure: Faster, cheaper, more reliable, safer, greener*".

The first plenary session featured a rich blend of high-level cross-modal speakers who all discussed "*How we can foster the Innovative maintenance of Transport Infrastructure*". The first speaker, MEP Gesine Meißner (Group of the Alliance of Liberals and Democrats for Europe), outlined that while more money is needed in Europe to pay for transport infrastructure, there is never enough, and welcomed industries, road users and entrepreneurs to make proposals to politicians to carry out better policy making. This was picked up by the other speakers from the European Commission and European Technology Platforms and associations, who also included innovative ways to achieve more collaboration between the transport modes, including through the [cross-modal](#)

FIRM15 round table participants

A dynamic round table discussion on "Investing in innovative transport infrastructure, a critical matter at stake for European competitiveness and social cohesion" covered in particular the challenges facing Europe, namely that little attention is given to the maintenance of transport infrastructure. While different funding mechanisms exist, these do not cover the total required costs and it is difficult to get money for maintenance. According to the high-level participants, which included MEP Wim Van de Camp (Group of the European People's Party), the EC and European associations (CEDR, EIM, ERF and EURNEX) and FEHRL Executives, maintenance should be seen more as an investment to drive benefits for private partners and society/community.

Three technical sessions, moderated mostly by FEHRL Directors, featured an introduction to the needs and challenges of Transport Infrastructure owners followed by the proposed solutions. In parallel to the whole event, there was a [mini-expo](#) of key partners and projects. More information can be found [here](#), presentations [here](#) and photos [here](#).

... and kicks off FOX and USE-iT, two new Horizon 2020 projects

FOX and USE-IT consortium

On 7-8th May, FEHRL kicked off two new Horizon 2020 projects called FOX (Forever Open Infrastructure across (X) all transport modes), which looks at the technical areas of Construction, Inspection, Maintenance and Recycle & Reuse, and USE-iT (Users, Safety, security and Energy In Transport infrastructure) at a joint meeting for some 25 researchers. The meeting looked at each of the Work Packages, as well as the synergies between these and other projects in terms of building a network of researchers and practitioners from the different transport modes and setting the agenda for the further improvement of cross-modal research development innovation, as well as the demonstration and implementation of the results. Click [here](#) to

access the FOX presentations and [here](#) for USE-iT.
